Algorithms Task

Non-Recursive Pseudo-code

```
ALGORITHM DiagonalDifference(A[0..n-1][0..n-1])

// Computes the absolute difference between diagonals

Input: n × n matrix A

Output: integer difference

primary ← 0

secondary ← 0

for i ← 0 to n-1 do

   primary ← primary + A[i][i]

   secondary ← secondary + A[i][n-i-1]

return |primary - secondary|
```
